Join the 2 Wing Pieces to Bed Head

Unzip bed head located at back of headboard

Place the 'wing piece' to next to bed head. Use Allen key to tighten the bolt from inside zipper until secured

Use 2 of these long bolts with the big nut on each side of the headboard (inserted from inside the zipper)

Position Different Brackets in the Right Spots

Position middle support beam bracket here

Position triangle bracket here

Position rectangular bracket here

How the Corners Should be Joined

**Position triangle
bracket here**

**Install round feet onto triangle
bracket with short bolt**

**Position rectangular
bracket here**

Joining the Metal Side Railings to the Side Panels

Attach side railing to side panel using
5 long bolts for each side

Joining the Metal Side Railings to the Side Panels

Position the middle support beam on top of the brackets fixed to the headboard and footboard

Use 1 long bolt to lock the beam to the bracket

Joining the Metal Side Railings to the Side Panels

Connect the plastic clips to the wooden slat pieces

Place metal support legs underneath the middle support beam, and fix using the long bolts and nuts provided

Once all the plastic clips are attached to the wooden slats, push down onto the bed frame beams to lock in place
